

## Homework 8

Most of the code for this assignment is given in the directory. You need to make some of the inheritance virtual, and you need to add base class constructor calls and attribute initializations to the initializer lists of the constructors. When you are finished, your code should compile and when run give the following output:

Creating a new Student

Person

Student

Creating a new Teacher

Person

Teacher

Creating a new TA

Person

Teacher

Student

TA

### What to turnin:

Turn in your code in a directory called *userid*, where *userid* is your Purdue login id. Include a make file that builds and runs your program. Zip up the *userid* directory and turn it into Brightspace.
